Non-Final Rejection

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim Objections

Claims 4-7 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim 3. See MPEP § 608.01(n). Accordingly, the claims 4-7 have not been further treated on the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United

States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 8-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Pearlman. Pearlman teaches the claimed invention including a ultrasound probe (figure 8), a three-dimensional position system (figure 1 and claim 1), a computer for controlling the ultrasound system (figure 1, reference 14), and a means for transmitting and receiving ultrasound signals (claims 1-10).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Torp et al., in view of Knell et al. Torp et al., teaches the claimed invention including ultrasound probe (figure 1, reference 140/146), a the probe generating high frequency ultrasound beams (claims 1-4), a tissue structure that is scanned by the probe (columns 7-9 and claims 1-8). However, Torp et al., does not clearly teach a means for have various signal processing means. Knell et al., teaches a means to process the received signals in multiple ways (column 20, lines 35-55). Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the processing means of Knell et al., with the image means of Torp et al., in order to accurately image a region of interest.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

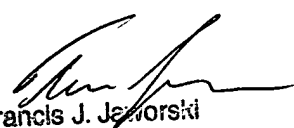

Dubberstien et al., teaches the claimed invention including a means for general ultrasound scanning using spatially distinct ultrasound beams.
